11/2/2015 (#23 this year)

The third grade have arrived back safely. I hope they all remembered to buy me a lot of presents! This week we have a number of things happening. The first, and probably most important for all of you, is that tomorrow is a public holiday¹. It is "culture day" so I expect all of you to dress in kimonos after breakfast and spend the morning doing the tea ceremony. After lunch you can do calligraphy² or a martial art³ until you have a kaiseki⁴ dinner. I am only joking but it is good sometimes to think about your culture and to practice it.

Something You Didn't Know (Population⁵ in 2050)

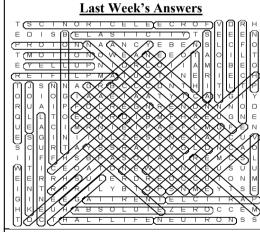

- 1. The world population will be 9 billion⁶ people.
- 2. India will have the most people, 1.6 billion.
- 3. 1.5 billion people will be over 65.
- 4. Japan will only have 80 million people.
- 5. The top three countries will be India, China, Nigeria.
- 6. Japan, Russia and Germany's populations will decrease⁷.
- 7. After 2050 there are three different ways the population could change. It could continue⁸ to grow, 1700 it could balance out⁹, it could fall. What will happen? For forth

POPULATION OF THE EARTH

Number of people living worldwide since 1700 in billions

Announcements

Tuesday is a holiday. 3rd grade have holiday Monday and Wednesday. 4th and 5th grade have tests on Wednesday. 1st and 2nd grades have English day on Sat.

News

China repeals One-ChildPolicy

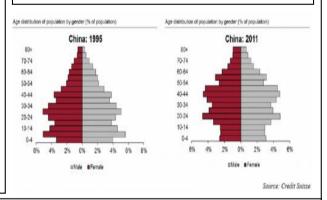

Last week China announced¹⁰ that it was repealing¹¹ its one child policy¹². The law¹³ was made in 1979 and has been enforced¹⁴ for over 30 years. The one child policy meant that married couples could only have one child. If they had more than one, they had to pay very heavy fines¹⁵ or have an abortion¹⁶. The policy was controversial¹⁷.

One of the problems China now faces²⁶ is an aging population²⁷, the same as Japan. To try and solve²⁸ this problem, and bring more young people into the country, they have decided to cancel the one child policy. That means the population will start to grow again and who knows how high it will go before it tops out²⁹.

In the 1970s China's population went over 800 million and by the end of the decade¹⁸ it was about to cross¹⁹ 1 billion people. The government²⁰ didn't know how to control it so they decided on²¹ the one child policy. This rapidly²² lowered²³ the birth rate²³ in the country and slowed the population growth. The population is expected to²⁴ peak²⁵ at 1.5 billion in 2030.
